LOVABLE COURSE

Final Project: Build a Complete App

Put everything you've learned into practice. Build a full app from scratch — with a landing page, user accounts, a database, and deploy it live.

YOUR APP MUST INCLUDE

1. **A landing page**
   A home page that explains what the app does with a clear call-to-action button.
2. **A main feature page**
   The core functionality of your app — a calculator, tracker, form, dashboard, or tool.
3. **User authentication**
   Sign up and sign in using Supabase so each user has their own account.
4. **Data storage**
   Save user data to the database — calculations, entries, logs, or whatever fits your app.
5. **A history or dashboard page**
   A page where users can view their saved data from previous sessions.
6. **A colour theme**
   A consistent colour scheme across the whole app with dark and light mode support.
7. **Knowledge rules**
   At least 3 rules in the knowledge file that guide how Lovable builds your project.
8. **Published live**
   Deploy your app so anyone with the link can use it.

HOW TO APPROACH THIS

Build step by step — just like we did in the course. Start with the main feature, then add the landing page, then authentication, then data storage, then deploy. Don't try to do it all at once.

8 Project Ideas

Each project is designed to use all the skills from the course. Pick one or create your own.

1 Personal Finance Tracker

Green & dark | Medium

Users log income and expenses with categories (food, rent, transport, etc.). The app calculates totals, shows a monthly breakdown, and tracks spending trends over time.

KEY FEATURES: Dashboard with totals, add/edit/delete entries, category filters, monthly summary page

2 Workout Log

Orange & dark | Medium

Users create workout sessions with exercises, sets, reps, and weights. The app saves each session and shows progress over time for each exercise.

KEY FEATURES: Add workout form, exercise library, session history, progress charts

3 Recipe Book

Warm red & cream | Medium

Users save their favourite recipes with ingredients, instructions, and prep time. They can search, filter by category, and scale ingredient amounts by servings.

KEY FEATURES: Add recipe form, search and filter, serving scaler, recipe detail page

4 Daily Journal

Purple & dark | Easy-Medium

Users write a daily journal entry with a mood selector, a text area for thoughts, and optional tags. They can browse past entries by date and filter by mood.

KEY FEATURES: Journal entry form, mood picker, date browser, tag filtering, entry history

8 Project Ideas (continued)

5 Habit Tracker

Teal & dark | Medium

Users create habits they want to build (drink water, exercise, read). Each day they check off completed habits. The app tracks streaks and shows completion rates.

KEY FEATURES: Add habits, daily checklist, streak counter, weekly/monthly stats

6 Study Planner

Blue & white | Medium

Students add subjects and study sessions with duration and topics covered. The app tracks total hours per subject and suggests which subjects need more attention.

KEY FEATURES: Add session form, subject breakdown, time tracking, study recommendations

7 Book Reading List

Amber & dark | Easy-Medium

Users add books with title, author, genre, and status (want to read, reading, finished). They can rate finished books and see reading stats.

KEY FEATURES: Add book form, status filters, ratings, reading stats dashboard

8 Freelance Invoice Generator

Dark & green | Hard

Freelancers enter client details, services, hours, and rates. The app generates a clean invoice they can view and tracks total earnings per client.

KEY FEATURES: Invoice form, auto-calculations, invoice preview, client history, earnings dashboard

Plan Your Project

Fill this in before you start building. A solid plan makes every step easier.

Project Name

What is your app called?

What does it do?

Describe the main purpose of your app in 2-3 sentences.

Main Feature

What is the core page/tool that users interact with?

User Data

What data will you save per user? (entries, logs, calculations, etc.)

Colour Theme

What colours and style? (e.g. teal and dark, warm red and cream)

Knowledge Rules

List 3+ rules for your knowledge file.

Build Checklist

Follow this order. Check off each step as you complete it.

- [ ] **STEP 1: Build the main feature**
  Write your first prompt and build the core page of your app. Test it thoroughly before moving on.
- [ ] **STEP 2: Add a landing page**
  Create a home page that explains what your app does with a clear button to the main feature.
- [ ] **STEP 3: Set up knowledge rules**
  Add at least 3 rules to the knowledge file so Lovable stays consistent as you build.
- [ ] **STEP 4: Polish the design**
  Use visual edits and follow-up prompts to refine colours, spacing, fonts, and layout.
- [ ] **STEP 5: Add dark/light mode**
  Use meta prompting (Plan mode) to get Lovable to write a detailed prompt for theme toggling.
- [ ] **STEP 6: Connect Supabase**
  Set up the backend. Create a Supabase project, connect it to Lovable.
- [ ] **STEP 7: Add authentication**
  Add sign up and sign in. Make sure users can't access the main feature without an account.
- [ ] **STEP 8: Add data storage**
  Save user data to the database. Every action should be logged under their account.
- [ ] **STEP 9: Add a history/dashboard page**
  Create a page where users can view their saved data from previous sessions.
- [ ] **STEP 10: Test everything**
  Go through the full flow: landing page, sign up, sign in, use the feature, check history, sign out.
- [ ] **STEP 11: Connect GitHub**
  Sync your project to GitHub as a backup before publishing.
- [ ] **STEP 12: Publish**
  Press the publish button and share your live URL with the world.

CONGRATULATIONS!

If you've completed all 12 steps, you've built and deployed a full-stack web application without writing a single line of code. Share your app URL and show the world what you built.
